ICON GUIDE

TOILET

	Heavy Duty Toilet Seat		PP toilet lid, slow-descent		Pressure-resistant
	Ultra-thin water tank		One-button cleaning		Premier cistern parts
	Full-glazed pipe, anti-fouling		Ultra water saving		Super durability
	Hyper flush, anti-fouling		Seamless high tank		Fired at 1280 degrees
	Dual flush, ultra water saving		Water tank of golden ratio		Instant-clean glaze

SINK

	Commercial Grade Satin Finish		Precisely crafted from high-grade stainless steel		Thickened and weighted stainless steel
	Pearl sand, no friction, long-lasting		Wear-resistant		Deeper sink
	Anti-condensation coating		Slanted drainage board easy to drain		Oil-proof design
	Anti-abrasion, rust-proof				

BASIN

	Easy cleaning glaze		Fired at 1280 degrees		Countertop basin
	Ultra-thin water tank		Edge grinding		

FAUCET

	360° Rotation		Multi-layer fine chrome plating		Precision valve
	Anodizing		Temperature control		Fine brushed oil sealing finish
	Multi-layer electroplating		Premium brass		Stainless steel
	Space aluminum		Ultra water saving		Premium Zinc alloy

SHOWER

	High alkali resistance, resist corrosion and tarnishing		Handheld Shower		Shower Head
	Switching mode		Tub Spout		Anodizing
	Space aluminum		Storage rack platform		Handheld shower spray

CABINET

	Paint-free solid wood boards		Space aluminum		Carbon fiber board
	Nano rock undercounter basin		Undercounter ceramic basin		Stainless slow-close hinge
	Different storage sections		Smart mirror		

FRENCIA SANITARY WARE FACTORY IN KENYA & GHANA

Global leader in manufacturing ceramic products

Installation and after-sales instructions

Sanitary ware installation and maintenance

All sanitary wares, especially shower trays, cannot be fixed with cement, because ceramics will expand and contract with heat. Fixing with cement can also cause ceramic cracking. It is recommended to use special screws or use silicone glass adhesive.

Do not directly contact the ceramic surface and cover plate with strong acid liquid or steel ball. If the glaze is chemically or physically damaged, it will cause problems such as color penetration. It is recommended to use clean water or neutral toilet cleaner.

Always check whether the screws of the cover are fixed. If the looseness of the screw is not handled in time, the hinge may be damaged.

Please find a professional to deal with the clogging of the toilet. Do not dredge it by yourself to avoid damage to the pipeline.

Clean the sand and impurities of the water tank regularly. If the impurities not cleaned in time, the flush valve and other accessories will be damaged, causing problems such as water leakage. It is recommended to install an angle valve with a filter screen.

Suggestions for dealing with common toilet problems

The clogging problem

Clean the sand and impurities of the water tank regularly. If the impurities are not cleaned in time, the flush valve and other accessories will be damaged, causing problems such as water leakage. It is recommended to install an angle valve with a filter screen.

Water consumption problem

The large amount of water stored in the frencia water tank does not mean that the water consumption is large. The water storage capacity can be lowered by adjusting the water valve of the water piece to achieve a balance between water saving and flushing power.

Transportation of toilets

Transportation, especially long-distance transportation may cause damage to the toilet. Pay attention to check the packaging and intactness before shipment. Ceramic products are fragile, so they should be placed according to regulations during loading, and avoid rain and bumps as much as possible during transportation.
